Anti Graffiti Non Porous

Smooth Surface Protective Coating

Clear, permanent graffiti protection for
metal, glass and painted surfaces.

WHY SPECIFY IT

Non-sacrificial

Paint and marker lift off time after time.

Ultra-thin and clear

Invisible on metal, glass and painted
surfaces.

Up to 7 years

Long protection from a single coat.

PFAS-free

Single coat

Invisible

Ready to use

What it does

A clear, very thin anti-graffiti coating for smooth, non-absorbent surfaces. Once cured, spray paint, marker and stickers cannot bond, so they come off with a VOC-free graffiti remover and gentle wiping, time after time, without re-coating. It also gives an easy-clean, water-shedding finish.

HOW IT WORKS

A polysilazane coating reacts with moisture in the air and converts into a hard, glass-like silica network that bonds chemically to the surface, leaving nothing for paints and inks to grip.

Where it's used

- Signage and electrical cabinets
- Trains and rail assets
- Glass, GRP and gelcoat
- Bus shelters and street furniture
- Powder-coated and painted panels
- Shipping containers

At a glance

10–15 ml/m²
COVERAGE

1 hour
