Anti Graffiti

Porous Surface Protective Coating

Permanent, invisible graffiti protection for
brick, concrete and masonry.

WHY SPECIFY IT

Non-sacrificial

Graffiti comes off again and again
without re-coating.

Invisible

Keeps the natural look of brick, stone
and concrete.

Single coat

Fast to apply; rain-safe in 5 hours.

PFAS-free

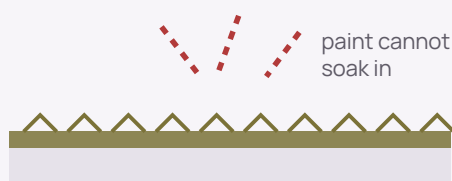

Single coat

Invisible

Ready to use

What it **does**

A single-coat, non-sacrificial anti-graffiti treatment for porous surfaces. It forms a clear, water- and paint-repellent barrier in and on the surface, so spray paint and markers cannot soak in. Graffiti can be removed again and again with a VOC-free graffiti remover and a low-pressure rinse, without re-coating and without ghosting or patchy repaints.

HOW IT WORKS

Reactive silanes cure with moisture in the air into a cross-linked siloxane network bonded in and on the pores. Paint and markers cannot soak in, so they release with a VOC-free remover.

Where it's **used**

- Brick, concrete and render
- Bridges and underpasses
- Walls and fences
- Natural and reconstituted stone
- Schools and public buildings
- Councils and transit operators

At a **glance**

80–100 ml/m²
COVERAGE

1 hour
TOUCH DRY

5 hours
RAIN-SAFE

7 days
FULL CURE

Non-sacrificial
TYPE

Ready to use, in trade and bulk packs.

For councils, transit operators and applicators. Ask us for trade pricing and samples.
