Anti Rust + Corrosion

Protective Coating

A clear, glass-hard barrier that keeps bright metal bright.

WHY SPECIFY IT

Keeps metal bright

Stops tea staining, tarnish and oxidation.

Invisible

A clear, glass-hard layer with no change in look.

Up to 5 years

Single coat, room-temperature cure.

PFAS-free

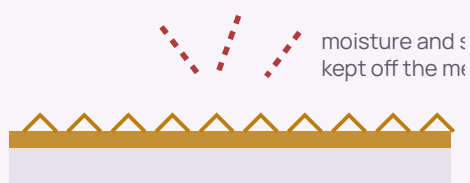

Single coat

Clear finish

Room-temperature cure

What it **does**

A clear, single-coat protective coating for clean, sound metal. It cures into a thin, glass-like layer that slows corrosion from moisture, salt and pollution and keeps surfaces easy to clean, without changing the look of the metal. It suits stainless steel tea-staining, aluminium oxidation and tarnish on copper and brass.

HOW IT WORKS

A polysilazane coating reacts with moisture in the air and converts into a dense, glass-like silica network bonded to the metal, slowing the moisture, oxygen and salts that drive corrosion.

Where it's **used**

- Stainless steel and aluminium
- Railings and outdoor fittings
- Signage and enclosures
- Copper, brass and bronze
- Marine hardware
- Coastal and industrial sites

At a **glance**

~15 ml/m²
COVERAGE

1 hour
TOUCH DRY

8-12 hours
WATER-SAFE

5-7 days
FULL CURE

Up to 5 years
LASTS

Ready to use, in trade and bulk packs.

For fabricators, facility managers and marine projects. Ask us for trade pricing and samples.
