

31

Car Polish + Seal

Protective Coating

Deep gloss and water beading from one easy
wipe-on coat.

WHY SPECIFY IT

Deep gloss

A slick, high-gloss finish in one step.

Strong beading

Water beads and sheets off; dirt releases at the next wash.

Long-lasting

12–18 months of protection from one application.

PFAS-free

SiO₂ reinforced

High gloss

One step

What it **does**

A silica-reinforced sealant that polishes and protects automotive paint in one step. It leaves a slick, high-gloss layer that makes water bead and sheet off. Bugs, bird droppings, road film and brake dust release more easily at the next wash.

HOW IT WORKS

Silica particles and a reactive silicone polymer form a thin, cross-linked layer on the clear coat. The silicone gives water beading and slickness, while the silica adds hardness and gloss.

Where it's **used**

● Cars and SUVs

● Caravans and campervans

● Boats and gelcoat

● Motorbikes

● Trucks and fleets

● Detailers and dealerships

At a **glance**

**60-80 ml per
car**
USE

**10-15
minutes**
WIPE OFF

24 hours
FULL CURE

12-18 months
LASTS

Ready to use
SUPPLIED

Ready to use, in trade and bulk packs.

For detailers, dealerships and distributors. Ask us for trade pricing and samples.
