Solar

Protective Coating

Cleaner panels for longer, with less soiling loss between washes.

WHY SPECIFY IT

Cleaner panels

Dust and grime rinse off more easily.

Fewer washes

Panels stay closer to clean output between cleans.

UV stable

Invisible film that does not change the glass.

PFAS-free

Invisible

UV stable

Easy-clean

What it does

An invisible easy-clean coating for the glass of solar modules. Dust, pollen and bird droppings bond less firmly, so rain or a simple rinse removes more of them, and panels stay closer to their clean output between maintenance washes.

HOW IT WORKS

Silica (SiO₂)-based building blocks form a glass-like film far thinner than the wavelength of light, with water-repelling groups facing outwards, so dirt has less to grip and rinses away.

Where it's used

- Rooftop solar arrays
- Commercial installations
- Utility-scale solar farms
- Solar water heaters
- Remote and hard-to-reach arrays
- O&M and EPC contractors

At a glance

8–12 ml/m²

COVERAGE

2–5 minutes

BUFF AFTER

24 hours

FULL EFFECT

Up to 5 years

LASTS

Invisible

FINISH

For solar O&M teams and EPCs.
