

10

Stone + Brick

Protective Coating Concentrate

Breathable, invisible water and stain
protection for masonry.

WHY SPECIFY IT

Breathable protection

Keeps water and stains out while vapour escapes.

Invisible, non-slip

No film, no gloss, no change to the stone.

Concentrate economics

Diluted 1:19 to 1:39 with deionised water on site.

PFAS-free

Breathable

Invisible

Water-based

Non-slip finish

What it **does**

A penetrating sealer for natural stone, brick, concrete, pavers and grout. It soaks into the pores and makes them repel water without forming a surface film, so the material looks the same, doesn't become slippery and can still breathe. Rain beads off, stains stay on the surface, and moss and grime find it harder to take hold.

HOW IT WORKS

The active ingredients penetrate the capillary pores and line them with water-repelling groups. Liquid water and the dirt and salts it carries are kept out, while water vapour can still escape.

Where it's **used**

- Marble, granite and sandstone

- Pavers, driveways and patios

- Heritage and façade restoration

- Brick, concrete and render

- Pool surrounds and terraces

- Stone fabricators and builders

At a glance

70–100 ml/m²

COVERAGE

2–3 hours

TOUCH DRY

5 days

FULL EFFECT

1:19 to 1:39

DILUTION

Up to 5 years

LASTS

Supplied as a concentrate.

Diluted 1:19 to 1:39 with deionised water, so you ship and store a fraction of the volume. Ask us for trade pricing and samples.
