Anti Microbial Fabric

Residual Disinfection Coating Concentrate

Keeps disinfecting fabric between cleans, for
up to 12 months.

WHY SPECIFY IT

Residual disinfection

Keeps destroying 99.9% of microbes
between cleans.

Up to 12 months

Bonds to the fibres; survives up to 10
washes.

Invisible

No change to look, feel or breathability.

Residual disinfection

PFAS-free

Water-based

Invisible

Spray applied

What it **does**

A long-lasting anti microbial coating for fabric, upholstery and textiles. Unlike a disinfectant spray, which stops working as soon as it dries, it bonds to the fibres and keeps destroying 99.9% of microbes that land on the fabric, for up to 12 months. Fabric keeps its look, feel and breathability.

HOW IT WORKS

Ordinary disinfectants stop working the moment they dry. This coating anchors a quaternary ammonium silane to the fibres; its positively charged groups disrupt microbes that land on the fabric, so protection continues between cleans.

Where it's **used**

- Hospital and aged-care furnishings
- Bus, train and aircraft seating
- Uniforms, school wear and PPE
- Hotel bedding and upholstery
- Office and school seating
- Gyms, cinemas and public venues

At a **glance**

**99.9% of
microbes**
KILLS

**Up to 12
months**
RESIDUAL ACTION

60–80 ml/m²
COVERAGE

After 6 hours
READY TO USE

**Up to 10
washes**
WASH DURABILITY

Residual disinfection for every fabric surface.

Supplied as a concentrate with dilution guidance. Ask us about hospital, hospitality, transport and facility contracts.
